CE RoHS  
Compliant

# MDX+ Integrated Servo Motor

## Product overview

The MDX+ series is a family of low-voltage servo systems that integrate a servo drive, servo motor and encoder into one package. Solutions with power output of 100/200/400/550W are available. The MDX+ product line supports pulse train based control methods (Pulse&Dir, CW/CCW, encoder following), RS-485, CANopen and EtherCAT. It also offers packages with electromagnetic brakes and STO to meet the safety requirement of today's industries. The MDX+ series is an ideal solution for manufacturers in logistics, AGV, medical, semiconductor and solar industries among many others.

The MDX+ servo drive is debugged by Luna software. It is meant to assist users with configuration, tuning and troubleshooting of the MDX+ family. The software and the drive are connected via USB for fast and reliable communication.

## Features

- Drive and motor integration offers a compact design
- Main power supports 24-60 VDC, Auxiliary power supports 24 VDC
- Standardized frame sizes of 40/60/80mm, covering a power range 100W to 550W
- EtherCAT, CANopen and RS-485 options
- Equipped with 17-bit magnetic incremental encoder or 17-bit batteryless absolute encoder
- Accurate Positioning and Control
- Support position control, velocity control, torque control
- Built-in brake option is available
- IP20 or IP65 options available

## Applications

MDX+ series integrated servo motors have a wide range of applications:

Packaging

Logistics

Material Inspection

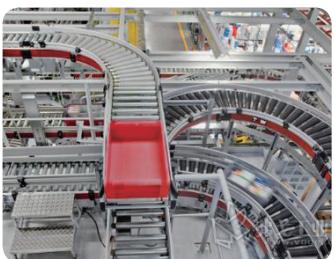

Public Space

AGV

Electronic components

Medical

Textile

## Features

### ■ Compact Design

MDX+ series is designed to be small and compact, providing a smaller, yet equally capable solution when compared to stand-alone motor and drive systems. The MDX+ series is ideal for applications with limited installation space with its form factor that is at least 20% smaller than that of standalone solutions.

**Less components

## ■ Safe Operation

### ● STO

Safe Torque Off (STO) is a hardware level safety protection function. When the STO function is activated, the ability to drive motor current is cut-off. In case of an emergency, this function can increase human and equipment safety while the drive is continuously powered.

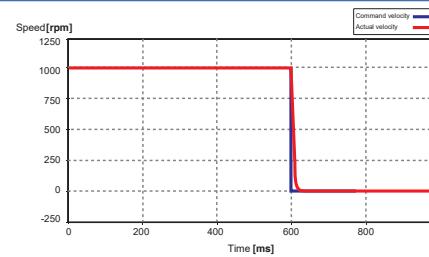

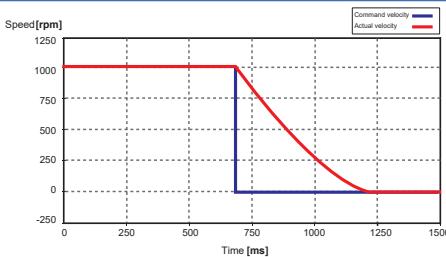

MDX+ series drive meets UL61800-5-2(SIL 3), IEC61508, ISO138491(PL e).

### ● Dynamic Brake

Dynamic brake is a mechanism that stops the motor with the fastest speed by shorting the motor three-phase in case of an emergency, the intention is to protect the safety of equipment and surrounding. Dynamic brake is driven by motor's back EMF current, no external power source is needed to engage or disengage the brake function.

The following graphs show what emergency induced stops, when a fault is present, behave like without and with dynamic braking.

#### Without Dynamic brake

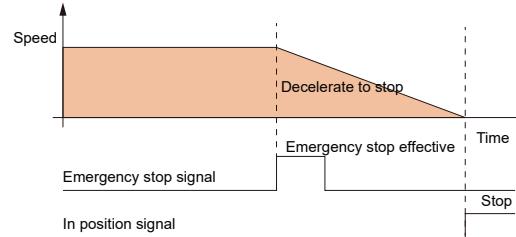

The motor is disabled and decelerates in an uncontrolled manner. The deceleration time and distance are determined by the system inertia and friction.

#### With Dynamic Brake

The velocity command is set to 0 as soon as the drive is disabled. The actual velocity ramps down immediately as the brake is applied.

### ● Emergency Stop

- ◆ When the communication between the controller and drive fails during motion, the drive will trigger the watchdog function which will decelerate the motor according to the preset rate and mode.
- ◆ I/O functions and field bus control commands can be used to stop a motor in an emergency situation. The motor will stop with the method and deceleration rate configured by the customer.

### ● Protective Functions

Over voltage protection

Over current protection

Over temperature protection

## ■ Waterproof and Dustproof

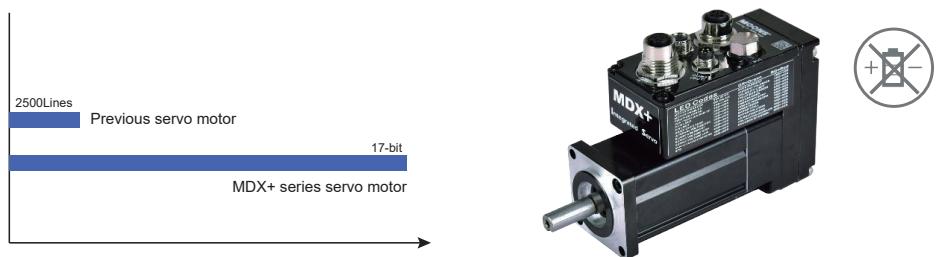

MDX+ series integrated servo motors are available with IP65 rating. See Part Numbering System for model selection.

## ■ High Positioning Accuracy

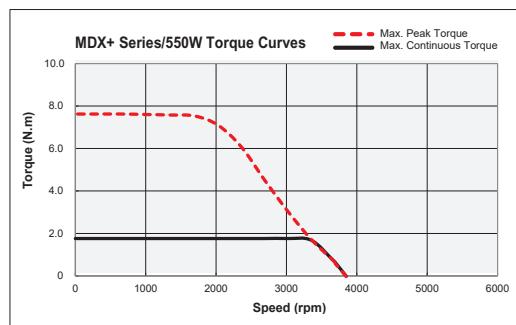

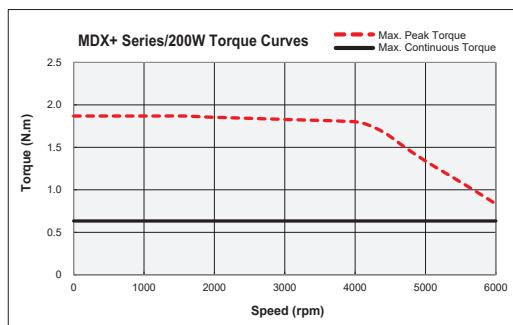

Combining a high resolution encoder design with low cogging characteristics, the MDX+ product line provides the ultimate smooth and accurate positioning experience.

- ◆ 17-bit incremental/absolute magnetic encoder with up to 131,072 feedback pulses per revolution
- ◆ Battery-less absolute encoder option to ensure position storage despite power cycles.

## ■ 300% Peak Torque Capable

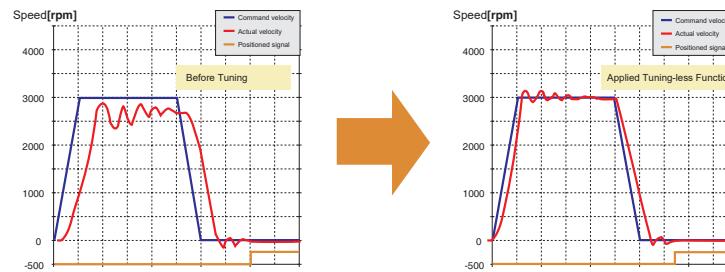

- ◆ Peak torque values of up to 300%, providing higher acceleration and deceleration rates.
- ◆ MDX+ Series 550W models can provide peak torque of up to 400% of rated torque.

## ■ Easy Tuning

### ● Tuning-less Function

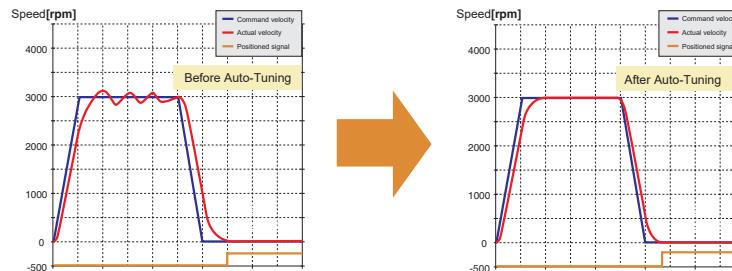

- ◆ No tuning is required for load up 30 times load inertia ratio.
- ◆ No limitation towards any load type and drive control mode.
- ◆ High robustness for maximum control of servo system stability.

### ● Auto-tuning

The real-time auto-tuning algorithm can automatically identify the load inertia (ratio), gain and vibration suppression parameters in real time.

The auto-tuning function can greatly shorten your system tuning time, improve system responsiveness and equipment production efficiency.

## ■ Unique Q programming function

Q Programmer is MOONS' own single-axis motion control software based on SCL commands. It can be used to create sophisticated and functional programs that can be saved to a drive's nonvolatile memory, and then run stand-alone, or without a permanent connection to the host. Q drives offer a high level of flexibility and functionality to the machine designer and system integrator.

### Capabilities:

- Motion control commands (relative position, absolute position, homing mode, etc.)
- Multi-Tasking (execution of subsequent commands while motion profile is executed)
- Conditional Processing (based on external I/O or internal commands)
- Math Functions (+, -, \*, /, &, or)
- Data register manipulation
- Program order of execution (loops, function calls, jumps)

Line	Label	Cmd	Param1	Param2	Comment
1	MT	1			Turn ON Multi-Tasking
2	DL	3			Turn OFF limits
3	PF	2000			Set Position Fault limit
4	CC	2			Set continuous current to 50%
5	CP	2			Also set peak current to same
6	DI	4000			Make distance positive for CW
7	JM	1			Set Jog mode to positioning
8	JS	1			Set Jog speed to 1 rev/sec
9	JA	10			Set Jog accel to 10 rev/sec/sec
10	CJ				Start jogging
11	Label2	TR	x	100	Test Reg "x" against 100
12		QJ	G	#Label1	Jump if greater than
13		TR	x	-100	Test Reg "x" against -100
14		QJ	G	#Label2	Jump if greater than
15	Label1	SM	M		Stop move with max accel (AM)
16		WM			Wait for stop to complete
17		EP	0		Set encoder position to zero
18		VE	1		Set Velocity to 1 rev/sec
19		DI	-8000		Set home offset distance (CCW)
20		FL			Do a Relative move
21		WM			Wait for move to complete
22		SP	0		Set absolute position to zero
23		AX			Clear any faults just in case
24		WT	0.1		Wait 0.1 seconds

## ■ Field-bus Options

There are many applications based on fieldbus communication in industrial automation. The MDX+ series servo system can support EtherCAT, RS-485 (including Modbus RTU), and CANopen.

### ● CANopen

Standard CAN bus interface is available in MDX+ series servo drives, which makes it easy to get integrated into an existing CANopen network.

Items	Specification
<b>Physical Layer Standard</b>	CIA 303-1 Cabling and connector pin assignment
<b>Communication Protocol</b>	CIA 301 Application Layer and Communication Profile CIA 402 Device Profile Drives and Motion Control
<b>Bus Connector</b>	Molex
<b>Baud Rate</b>	12.5Kbps, 20Kbps, 50Kbps, 125Kbps, 250Kbps, 500Kbps, 800Kbps, 1Mbps
<b>Communication Objects</b>	SDO, PDO, SYNC, EMCY, NMT, Heartbeat
<b>Control Mode</b>	Interpolated Position, Profile Position, Profile Velocity, Profile Torque, Homing Mode
<b>PDO Data</b>	4 RxPDOs, 4 TxPDOs
<b>Support Axis</b>	Up to 112 axes

### ● Modbus

MDX+ series servo drives provide the Modbus/RTU communication function with RS-485 interface, which can be used to easily control the motor, set parameters or monitor the status of the drive.

Items	Specifications
<b>Physical Layer Standard</b>	RS-485
<b>Communication Protocol</b>	Modbus/RTU
<b>Bus Connector</b>	Molex
<b>Baud Rate</b>	9600bps, 19200bps, 38400bps, 57600bps, 115200bps
<b>Control Mode</b>	Position Mode, Velocity Mode, Torque Mode, Homing Mode, Q Program
<b>Support Axis</b>	Up to 32 axes

### ● EtherCAT®

- Full duplex, communication baud rate 100Mbps
- Supports CoE(CiA 402 protocol), VoE(Vendor over EtherCAT)
- Supports PP, PV, TQ, CSP, CSV, CST, HM mode

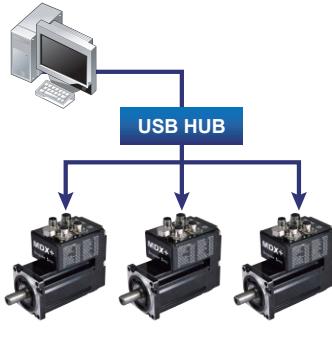

MOONS' has a variety of EtherCAT capable product lines that can meet all of our user's needs.

## ■ Friendly Software

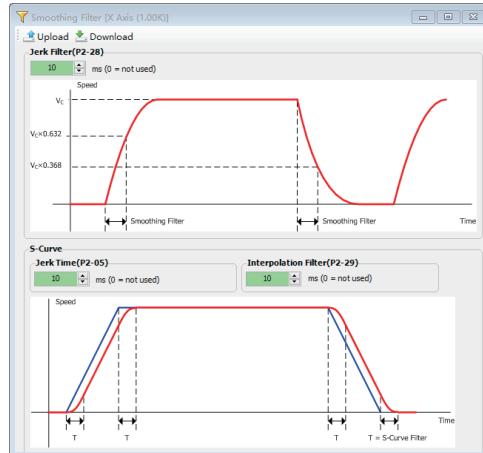

### ● USB Multi-axis Tuning

Based on USB communication, it can realize multi-axis tuning, simple and convenient.

### ● Graphical Setting Interface

Descriptive and clear visual aids help configure necessary functions.

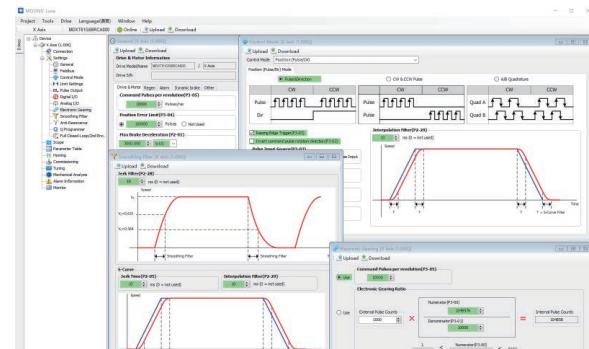

### ● Powerful Oscilloscope Function

- Real-time data curve display
- Up to 4 channels with 16bit data per channel and 8kHz sampling rate
- Up to 2 channels with 32bit data per channel and 8kHz sampling rate
- In the selected cursor area, display the maximum value, minimum value, root mean square, etc.
- Customizable trigger conditions
- Status monitoring capabilities of the drive and its digital I/O.

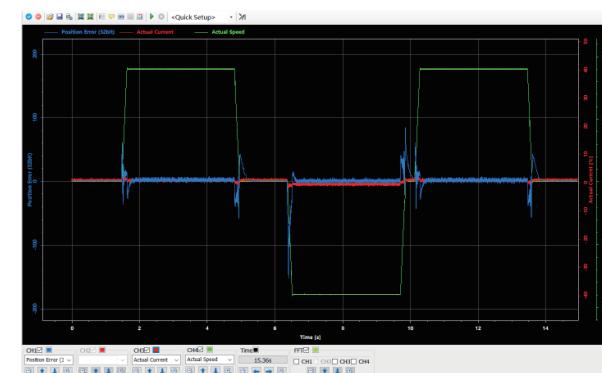

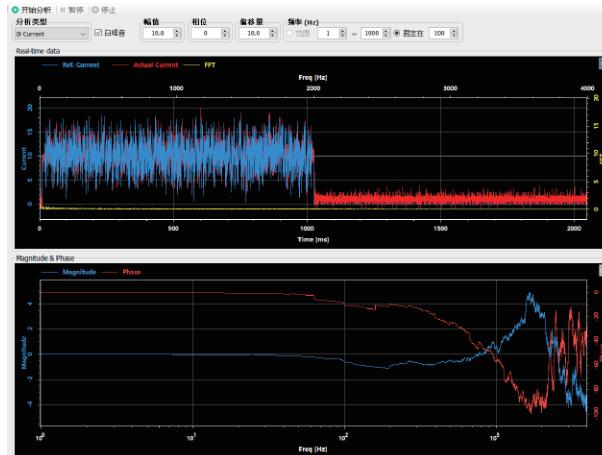

### ● Device Tree Layout

Luna software leverages the device tree layout, multi-window access functionality and clear function classification for improved user experience.

### ● Mechanical Analysis

Quickly diagnose the frequency characteristics of mechanical equipment via the Mechanical Analysis tools. Results can be used to set various notch filters to minimize the effects of resonance.

## ■ General Specifications

### ● Safety Certification

MDX+ series products are designed to meet the following standards.

		Drive	Motor
Europe	EMC	EN 61800-3	EN 60034-1
			EN 61000-6-2
	LVD		EN 61000-6-4
Function Safety (STO)		EN 61800-5-1	EN 60034-1
			EN 60034-5
			UL61800-5-2(SIL 3)
UL Standard		UL 61800-5-1	IEC61508
			ISO13849-1(PL e)
CSA Standard		C22.2 No.274-13	UL 1004-1
			UL 1004-6
CSA Standard		C22.2 No.274-13	CSA C22.2 No.100

### ● Brake Specifications

Electromagnetic brakes, like those available on MDX+, are used to prevent undesired motion when the servo system is shut down. The most common use case for brakes are vertical applications in which they are used to prevent the load from falling in the event of power loss.

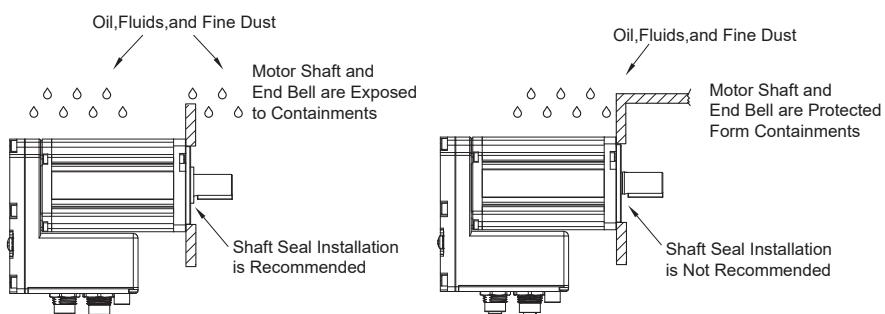

When the brake is powered on, its armature is retracted and the brake pad is released, allowing for rotation of the motor shaft. When the brake is powered off, the armature is released, the brake pad is re-applied and normal operation of the motor is no longer possible.

Frame	40mm	60mm	80mm
Static Friction Torque (Nm)	0.32	1.5	3.2
Rated Voltage (VDC)		24	
Power Waste (W @ 20°C)	6.3	7.2	9.6
Current (A)	0.26	0.3	0.4
Braking Time	< 70ms (Standard air gap,at 20°C)		
Release Time	<25ms		
Release Voltage	18.5VDC max.(at 20°C)		

### ● Shaft Seal

Industrial oil seals can block contaminants (oils, impurities) to extend the life of the motor. The oil seal will produce a certain resistance to the motor shaft, Motor torque output should be de-rated by 10%.
